New Active Shooter Training and Early Warning Monitoring Available

Annapolis, MD (March 6, 2018). In response to the continued rise of active shooter incidents throughout the US resulting in horrific tragedy, Resilient Corporation, through its subsidiary CRA, Inc., announces the launch of its revised and improved Active Shooter Workshop training program. This active shooter training for communities compliments the social media monitoring CRA presently provides for police departments. Social media monitoring provides law enforcement personnel with intelligence and early warning of potential incidents, and provides a tool for the monitoring of large events, protests or other similar events.

The new Active Shooter Workshop has been designed to provide public and private sector business and security managers with practical tools that can be implemented immediately. In addition to focusing on active shooter incident response, the training workshop helps clients to develop assessments, training, and plans tailored to their specific facility. The new training program incorporates the lessons learned over CRA's decades-long experience of teaching active shooter courses, is informed by recent active shooter incidents, and is appropriate for corporate, hospitality, airports, law enforcement and other audiences.

Former Speaker of the House Newt Gingrich commented that "Gun-free zones do nothing to stop mass killers. Resilient Corporation's workshops arm citizens with the knowledge and training necessary for communities to deter and respond to active shooter situations."

"There has been endless debate about what the appropriate action and response should be to an active shooter. Post 9/11 efforts to organize them have increased dramatically our capacity to defend ourselves, but the simple truth is that a target to resources gap remains, and it will always be there, because we have too much to defend and too few resources for governments and the private sector to protect them," said Major General Bruce M. Lawlor, USA (Ret.) who helped organize the U.S. Department of Homeland Security, and became its first Chief of Staff. "One thing people can do is develop active shooter protocols and training to prepare as much as possible for an active shooter event. Schools, entertainment venues, transportation hubs, etc. can all benefit from planning and training. CRA can help with that. The goal is to avoid injury or death wherever possible," Lawlor said.

"Active Shooter training is one of several initiatives being deployed by Resilient Corp./CRA that addresses community resilience. We are actively working with an investment banker to secure \$13mm of capital from accredited investors to broaden the reach of additional training programs as well as Resilient's core business which is their ability to measure and score a community's resilience to disasters of all kinds be it weather related or in the case of active shooters, a man made catastrophe," said Mark Gembicki, CEO of Resilient Corporation.

About Resilient Corporation

Resilient Corporation is a privately held company that has developed the first and only objective, independent, resilience scoring system, The Resilient Score, using state-of-the-art competitive intelligence techniques for collecting open-source data and turning it into actionable intelligence through its proprietary algorithm and big-data analytics platform. As used by Resilient Corporation, the term “resilient” is defined as an organization’s capacity to anticipate disruptions, adapt to crisis events, recover from disasters, and create lasting value. Resilient Scores focus on measuring end-to-end operational resilience, enabling forward-thinking leaders and managers to understand, manage, and prepare their organizations for disruptions of varying magnitudes while finding new opportunities for efficiencies and growth. www.resilient.com

About CRA

Established in 1984, CRA is a nationally-recognized leader in the fields of homeland security, emergency management, planning, training, and exercises. Our staff of full-time professionals and our nationwide network of “on-call” subject-matter experts are highly regarded for their knowledge and skills in terrorism prevention, critical infrastructure protection and resilience, emergency management, information sharing and intelligence analysis, and law enforcement. We remain on the forefront of several national security and preparedness initiatives. We are currently conducting a breakthrough series of active shooter training and exercise projects nationwide. We also staff qualified intelligence and criminal analysts at fusion centers and real-time crime centers and continue expanding programs to secure positions in multiple departments throughout the country.
